

## RFV PEAQ STICK ORDER FORM

The PEAQ (Prediction Equations for Alfalfa Quality) method, developed by the University of Wisconsin-Madison, is a proven, low-cost method for instantly estimating the relative feed value of standing alfalfa. The first harvest is typically the highest yielding yet most difficult crop to put up in a timely manner. The PEAQ stick provides a simple, effective tool to schedule your harvest to achieve feed value target levels.

**RFV PEAQ STICK:**

MFA Member: **Quantity** \_\_\_\_\_ x **\$20.00\*** = \$ \_\_\_\_\_
